

Product Requirements Document (PRD)

Product Name: VWO – Digital Experience Optimization Platform

Product URL: <https://app.vwo.com/>

Prepared By: Mansi Deshman

Date: January 7, 2026

1. Product Overview

VWO (Visual Website Optimizer) is an enterprise-grade Digital Experience Optimization (DXO) and Conversion Rate Optimization (CRO) platform that enables businesses to understand user behavior, test experiences, personalize interactions, and make data-driven decisions to improve conversion outcomes across web and mobile digital properties. It is widely used by product, marketing, UX, and analytics teams to optimize user journeys and business metrics.

2. Business Objectives

Primary Goals

- Improve conversion rates across key user funnels (e.g., sign-ups, purchases, lead forms).
- Enable teams to test hypotheses and validate UX changes with empirical data rather than assumptions.
- Reduce engineering dependency for experimentation and optimization workflows.
- Provide unified insights across multiple optimization activities (testing, personalization, analytics).

Stakeholders

- Digital Product Managers
- UX / UI Designers
- Growth & Marketing Teams
- Data Analysts / CRO Specialists
- Engineering / DevOps Teams

3. Target Users

Primary Users

- CRO Specialists
- Product Managers
- UX Designers
- Digital Marketers
- Analysts

Secondary Users

- Engineering teams (backend and frontend)

- Business executives (for strategic insights)

4. Core Features & Capabilities

4.1. Experimentation & Testing

VWO Testing enables robust experimentation across digital touchpoints. Capabilities include:

- A/B Testing, Split URL Testing, Multivariate Testing.
- Audience targeting based on behaviors and attributes.
- Custom goals and metric configurations aligned with business KPIs.
- Bayesian-powered Intelligent stats engine (SmartStats) for accurate results.
- Version previews, cross-device/cross-browser QA, scheduling, and reporting.

Requirement Highlights

- Users can define experiments with multiple variations.
- Results are statistically validated and actionable reports generated.
- Integration with analytics tools (Google Analytics, Mixpanel) for extended insights.

4.2. Behavioral Insights

VWO Insights provides qualitative data on user interaction:

- Heatmaps (click, scroll, focus)
- Session recordings
- On-page surveys & feedback
- Funnel analytics to identify drop-off points

Use Cases

- Visualize user actions on key pages.
- Discover pain points and UX bottlenecks prior to testing.
- Validate assumptions with real user behavior data.

4.3. Personalization

VWO Personalize enables tailored user experiences:

- Segment users by geography, behavior, demographics.
- Deliver customized content in real-time.
- Enhance engagement and conversions with targeted experiences.

4.4. Program & Workflow Management

VWO Plan / Program Management

- Central planning interface for optimization initiatives.
- Collaboration tools for distributed teams.
- Kanban style workflows for experiment backlogs.

4.5. Integrations

VWO integrates with a broad ecosystem of analytic, CRM, commerce, and data platforms, including:

- Shopify, Salesforce, Segment, Snowflake
- WordPress, Drupal
- CDPs and analytics systems
- Tracking & reporting tools for unified data workflows

5. User Flows

5.1. Setting Up an A/B Test

- 1 Define hypothesis and target metrics.
- 2 Select audience segment parameters.
- 3 Configure test variations (via visual or code editor).
- 4 Launch test and monitor progress.
- 5 Review SmartStats results and conclude winner.

5.2. Analyzing Behavioral Data

- 1 Access VWO Insights dashboard.
- 2 Generate heatmaps, record sessions, set funnels.
- 3 Correlate behavior insights with test outcomes.
- 4 Prioritize optimization ideas.

6. Functional Requirements

ID	Feature	Priority	Description
FR1	A/B, Split & Multivariate Testing	Must	Execute experiments with multiple variations.
FR2	SmartStats Engine	Must	Provide Bayesian analysis for test results.
FR3	Visual & Code Editor	Must	Support WYSIWYG and developer-level experiment setup.
FR4	Heatmaps & Session Recordings	Must	Capture user interactions for insights.
FR5	Audience Targeting	High	Enable segmentation based on behaviors.
FR6	Real-time Reporting & Dashboards	Must	Deliver up-to-date experiment analytics.
FR7	Personalization Engine	High	Deliver tailored experiences to segments.
FR8	Integration Connectors	High	Sync data with external platforms.
FR9	Collaboration & Workflow Management	Medium	Tools for planning and team tasks.

7. Non-Functional Requirements

Category	Requirement
Performance	System responds within 2 seconds for editing workflows.

Category	Requirement
Security	2FA, role-based access control, activity logs.
Scalability	Support high visitor volumes without performance loss.
Data Privacy	Compliance with GDPR, CCPA, and regional data policies.
Reliability	99.9% uptime SLA for enterprise customers.

8. Success Metrics (KPIs)

- Increase in Conversion Rate (%) across prioritized pages
- Velocity of experiments launched per quarter
- Reduction in engineering time for experimentation
- Engagement rate of personalized campaigns
- Customer satisfaction/NPS for platform usability

9. Pricing & Licensing

VWO pricing varies by feature set, monthly tested users, and plan tiers (Growth / Pro / Enterprise). Pricing can start with free tiers for small segments and scale to enterprise subscriptions depending on usage volume and advanced capabilities.

10. Risks & Mitigations

Technical Complexity

- Mitigation: Provide robust SDKs and documentation, pre-built templates.

Data Accuracy Challenges

- Mitigation: Use SmartStats and cross-tool validation integrations.

User Adoption

- Mitigation: Onboard with guided tours, in-app support, analyst assistance.

11. Future Enhancements

- AI-driven suggestion engine for test ideas and personalization patterns.
- Native mobile SDK enhancements for app experimentation.
- Advanced predictive analytics and ROI forecasting.

12. Appendices

Glossary

- CRO: Conversion Rate Optimization
- A/B Test: Controlled experiment comparing variants

- SmartStats: Bayesian statistical engine for experiment results
